StrataCare to remain the primary bill review partner for joint clients

StrataCare said that it has completed the sale of its GenSource division to P&C Claims, an affiliate of P&C Insurance Systems. StrataCare has engaged PCIS to develop AIPEKS as GenSource's claims software platform.

Under the agreement, StrataCare will remain the primary bill review partner for joint clients. The GenSource clients will continue to benefit from EDI connectivity and integration with StrataWare.

Founded in 1998, StrataCare provides internet-based national medical bill review software, workflow and outsource solutions to the workers' compensation payer community. Its service division CareSolutions, offers electronic and mail-in bill review services nationwide.

Scott Green, CEO of StrataCare, said: "We believe P&C Claims is uniquely positioned to deliver on our vision to provide GenSource customers a next-generation, web-based claims solution. We chose P&C Claims as part of our commitment to our claims software clients to continue to provide the level of service and support that they have experienced from our people.

"The sale of the division supports StrataCare's strategic decision to focus primarily on medical cost containment and workflow solutions for national workers' compensation bill review."

P&C Insurance Systems provides policy administration and claims software that supports the business requirements of the property and casualty insurance industry.
